

SH30 Headset

SH30

- Volume control
- Radio transmit PTT
- M65S mic

THE DETAILS:

Avcomm's exclusive EasyLink™ design utilizes detachable cords with positive-lock connectors. This feature allows the headset to connect with virtually all major brands of safety intercoms. The secret is the unique jack design built into the ear dome(s) and the independent detachable cord that simply plugs into the headset and radio.

If your safety fleet vehicles have different brands of intercoms, simply select the compatible cord for each system, plug it in and you are ready to work. Do you prefer the cord connection on the right or left side? Simply unplug and reconnect to the other side.

This exclusive feature provides versatility, allowing you to connect the cord to either ear dome, as well as provide "quick fix" capability since you can easily replace the cord, and not the whole headset. The last thing you want to worry about when your headset needs service is how long it will take to get back. Now, simply replace the cord in seconds and you're back to work.

The full flex boom provides precise microphone placement for easy positioning even with gloves on and swings away for extra convenience. The noise-canceling electret microphone eliminates unwanted background noise while amplifying desired voice signals so you can be heard more clearly.

SH15 single-side with adjustable stainless steel headband features a plush side pad and pillow soft contoured head pad.

PATHOGENICS AND HYGIENE:

Because Avcomm headsets feature detachable cords, users can take their own headset with them easily and connect/disconnect as needed. This is an affordable way to reduce the spread of pathogenic viruses caused by shared headsets since the headset and cords are sold separately. In addition, Avcomm mic muffs are hypoallergenic and completely washable for maintaining hygienic usage.

ADDITIONAL FEATURES:

Rugged cables with durable polyurethane insulation and spiral shielding to reduce RF interference, a highly reliable electret noise canceling mic for excellent sound quality, a full flex boom for easy positioning even with gloves on, volume control, and a choice of three colors for personal identification or Department preference.

Features and Benefits:

- Convenient volume control featured on all models
- The ear cups are manufactured from high impact ABS plastic for tensile strength, chemical and heat resistance. They are easy to clean with liquid household detergent. In addition, both ear domes swivel and rotate to provide a perfect custom fit.
- The adjustable over-the-head Velcro® strap provides height adjustment and headset support for perfect placement while the band behind the head provides a secure and comfortable fit (SH20 through SH60). Model SH10 features easy-to-adjust stainless steel construction for a perfect custom fit.
- All Avcomm Fire/Safety Headsets are backed by a 2-year factory warranty

Notes:

- SH10 through SH40 headsets connect to intercom only
- SH50 headsets features (1) jack to connect to the intercom, and (1) jack to connect to a handheld radio
- SH60 features (2) jacks, both connecting to (2) handheld radios

Speaker	Microphone
• Impedance: 150 ohms	M-65 Electret Noise Canceling Mic (Amplified)
• Frequency Range: 100-17,000 Hz	• Frequency Response: 3-8,000 Hz
• Sensitivity: 101dB with 1mW Input	• Mic Source Resistance: 220-2200 ohms
• Volume Control Range: 7~100%	M-70 Electret Noise Canceling Mic (Non Amplified)
	• Frequency Response: 100-10,000 Hz
	• Mic Source Resistance: 680 ohms
