

## Antenna Series

### Features:

- Single and multi-band, 2, 3, 6, 7, 13 and 14 GHz bands
- High gain
- Single or multi-polarity, linear and/or circular
- Low profile offset feed design
- Excellent front to back and sidelobe performance
- Rugged honeycomb/fiberglass design
- Lightweight
- Mounts directly to quick set QPT90 pan and tilt head

**Ideal for ENG/OB Trucks.** The Newsblaster ENG/OB truck mount antenna is ideally suited for broadcast ENG/OB truck applications. These high gain antennas are broadband by design and are available in bands from 2 to 15 GHz. The offset fed feed design permits choices of linear and/or circular polarization in either single or multi-polarity configurations.

The antenna's offset fed feed design offers excellent front to back and side lobe performance. The feed design is highly integrated to offer years of high reliability and low cost maintenance.

The low profile, lightweight reflector is constructed of a rugged honeycomb/fiberglass design. The mounting bracket allows for direct interface to the *quick set* QPT90 pan and tilt head. No additional brackets are required.
