

Master Control System

Features:

- Control equipment at multiple locations
- Control antenna systems, receivers, digital decoders, transmitters, video switchers, routers and other serial or parallel devices
- Track moving vehicles on a street level map
- View real-time video from each site

The TouchStar Master Control System provides full function access to remote camera and receive site equipment. The intuitive touchscreen interface allows operators to control TrollCam camera systems as well as S750 and TS-940SL remote site controllers at multiple locations with ease. The highly configurable TouchStar software navigates from one receive site to the next with the click of a button. There is no limit to the number of remote sites an individual master can control. A single screen can be configured to operate equipment simultaneously at numerous locations. The TouchStar Master Control System includes a high-grade, rack-mountable PC and a 17-inch touchscreen monitor.

The TouchStar software has the ability to control a variety of devices at geographically diverse locations. It integrates all of the necessary functions onto one panel so the operator has full control of local and remote devices regardless of their venue. The TouchStar software can be used to control video switchers, routers, microwave transmitters/ receivers and various other pieces of equipment with serial or discreet remote interfaces. The system provides a seamless transition from one device to the next by providing a common interface regardless of the manufacturer or vintage of the system. TouchStar Master Controllers can be networked, giving users the ability to simultaneously control the system from different workstations.
