Description

These Coaxial Dynamics Line Sections, with appropriate meter ([portable](#) or [panel mount](#)) and [plug-in elements](#), form a complete system to measure power in 50-Ohm coaxial cable and 7/8" transmission lines.

Several different models are available in either single socket or dual socket with a wide variety of connector options. Dual socket line sections allow both forward and reflected power measurements using only one line section and a meter with a FWD/RFL switch, or a panel mount configuration with 2 meters.

Your confidence in the quality and dependability of these Line Sections is assured with the Coaxial Dynamics Two Year Limited Warranty.
